Office Action Summary

Art Unit 1771

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-13, drawn to a thermally conductive assembly, classified in Class 428, subclass 343.

II. Claims 14-21, drawn to a method to form a flexible thermally conductive assembly, classified in Class 427, subclass +++.

2. III. Claims 22-35, drawn to a device, classified in Class +++, subclass +++.

3. IV. Claims 36-49, drawn to a method to transfer heat from a plurality of components disposed within an enclosure, classified in Class 427, subclass +++.

4. The inventions are distinct, each from the other because of the following reasons:

5. Inventions Group II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as by first encapsulating before the heating and removing the volatile component steps.

Art Unit 1771

6. Inventions Group I and Group III, and Group I and Group IV relate to an article (Group I) and either a substantially different article, or a method of making the substantially different article and as such are clearly not related for purposes of restriction.

7. Inventions Group II which relate to a method, and Group III which relate to a patentably distinct different article are also not related for purposes of patentability. Additionally, methods Group II and Group IV relate to patentably different methods of making different articles and as such are clearly not related for purposes of patentability.

8. Inventions Group IV and Group III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as by utilizing a different structure ^{for the} conducting step than applicants claim.

9. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit 1771

10. A telephone call was made to Dale Regelman on May 22, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

11. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel Zirker whose telephone number is (703) 308-0031. The examiner can normally be reached on Monday-Thursday from 8:30 A.M. to 6:00 P.M. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris, can be reached on (703) 308-2414. The fax phone number for this Group is (703) 872-9310.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661.
